

TABLE OF FIGURES

Figure 1: "Pathways" – a simple schematic	7
Figure 2: The palette of potential biofuels pathways	8
Figure 3: Commonly used classification of biofuels according to 'generations'	10
Figure 4: The 75 biofuel pathways identified as commercially interesting	11
Figure 5: Development status of biofuel pathways by biofuel	16
Figure 6: Substitutes for gasoline	17
Figure 7: Examples of major ethanol biofuel producers	18
Figure 8: Displacement fuels for diesel and heavy oils	19
Figure 9: Examples of technologies using transesterification for biodiesel production	19
Figure 10: Methane and hydrogen as fuel replacement	20
Figure 11: Catalytic conversion of syngas	23
Figure 12: Syngas catalytic conversion projects	24
Figure 13: Catalytic conversion of syngas: advantages & issues	24
Figure 14: Fermentation of cellulosic materials to ethanol	25
Figure 15: A list of publicised cellulosic ethanol projects	26
Figure 16: Cellulose-to-ethanol: advantages & issues	26
Figure 17: Syngas 'fermentation' to ethanol	27
Figure 18: Syngas fermentation projects	28
Figure 19: Syngas 'fermentation' to ethanol: advantages & issues	28
Figure 20: Fermentation of biomass to butanol	29
Figure 21: Fermentation of biomass to butanol: advantages & issues	29
Figure 22: Pyrolysis of biomass to diesel, jet fuel and gasoline	30
Figure 23: Commercial pyrolysis plants	31
Figure 24: Pyrolysis of biomass to diesel, jet fuel and gasoline: advantages & issues	31
Figure 25: Waste or biomass to diesel via Fischer-Tropsch synthesis	32
Figure 26: Fischer-Tropsch reference projects	33
Figure 27: Waste or biomass-to-diesel via Fischer-Tropsch synthesis: advantages & issues	34
Figure 28: De-oxygenation of vegetable oil and animal fats to produce diesel	35
Figure 29: Relevant de-oxygenation projects for diesel production from oils and fats	35
Figure 30: De-oxygenation of vegetable oil and animal fats to diesel: advantages & issues	36
Figure 31: De-polymerisation of various wastes to produce diesel	36
Figure 32: Relevant de-polymerisation projects	37
Figure 33: De-polymerisation to produce diesel: advantages & issues	37
Figure 34: Biogas to biomethane	38
Figure 35: Commercial plants for biomethane production	39
Figure 36: Biogas-to-biomethane: advantages & issues	40
Figure 37: Development status of biofuel pathways by feedstock	41
Figure 38: Technology pathways that are being explored by individual companies	50
Figure 39: Companies and the status of technology they are promoting	56
Figure 40: Companies actively developing processes for producing specific biofuels	57
Figure 41: Share of the different types of biofuels being targeted by the listed companies	63
Figure 42: Companies classified by type of feedstock being targeted	64
Figure 43: Share of the different feedstock being targeted by the listed companies	70
Figure 44: How energy carriers are normally derived from the primary energy sources	71
Figure 45: Biofuels companies – who are they?	75
